

AK 084 ENGINE OIL

An indispensable product for adding engine oil effects to your model. The results that can be attained are extremely realistic. This product can be used on any engine or to reproduce any oil effects no matter what scale you'll be working with.

If we apply the product directly from the jar on a previously treated surface with pigments we get a matte finish that closely mimics spills and leaks of oil and grease.

Once the product is applied and dried, if we insist on the same area will get a satin finish and even areas simulating oil sheens or newer grease.

We can also make vertical spillovers and dilute with AK011 White spirit.
